

Communication Solutions

From simple to complex, speech generating devices (SGDs) for augmentative and alternative communication (AAC) assist persons with disabilities at all levels of language development starting with simple, single message devices. Users can easily transition to basic choice making, sequential communication, and even more complex communication opportunities. AbleNet's complete line of SGDs is there for you at each stage.

When choosing a SGD, a few questions to consider:

- 1. How many messages will be required?
- 2. Where will the device be used — on a table, on a wheelchair, or in hand?
- 3. What access methods will be used, direct or external switches?
- 4. Does this device need mounting?
- 5. Will this device be used by an individual or in a group setting?
